

# WALL MEASURING TIPS - MEASURE TWICE, CUT ONCE

## HEIGHT

Walls may look perfectly square, but small variations do occur. To get the correct height of your wall, measure your wall at two points - where the mural will begin and where it will end. If the heights are different, use the taller wall height.

Measure to top of baseboards.

## WIDTH

Measure the wall along the floor. This ensures the measuring tape is flat and straight.

We automatically add "bleed" to the measurements you give us. Bleed is extra material at the top, bottom and sides that will assist with application, avoiding gaps near the ceiling or floor and between panels.

Be aware of the general position of doors, windows, and cabinets when you choose your mural section. Our Express Wall Murals can not be edited to move elements in the design.

Our Custom Murals take room features into account and our illustrators create custom layouts around them. If you would like to know more call 1.888.884.4102
